

SEPTO CLEAN

is a proven performer used by resort and campground operators across Canada since 1963.

CUSTOMER COMMENTS:

Your product has done marvels for our fishing camp. It's also marvelous to keep flies away from our fish cleaning sink.

Nimpo Lake, B.C.

We have been using Septo Clean in our outdoor privies since 1979. Our clientele not only do not mind using them, but invariably comment upon the absolute lack of odour and flies.

Thompson, Manitoba

Septo Clean is wonderful - even the company that pumps out our system will confirm this.

Osoyoos, B.C.

Test of Septo Clean in outhouses: The waste will drop to two and a half feet in the first 48 hours.

Whitehorse, Yukon

COMMERCIAL CHOICE**

WHY USE SEPTO CLEAN?

SEPTO CLEAN GREATLY INCREASES THE LIQUEFACTION OF SOLID WASTES AND PREVENTS OFFENSIVE ODOURS.

SEPTIC SYSTEMS & HOLDING TANKS

Only a perfectly designed system which is not being abused, will function perfectly. Unfortunately, this condition seldom exists. Because of this, the majority of septic systems will benefit from the increased action generated by Septo Clean. Pump out frequency will be reduced, odours eliminated and tile bed life will be dramatically increased. Even holding tanks benefit from the elimination of odours and easier pumping.

TILE FIELD FAILURE

Operators often don't realize they have a septic system problem until it's too late. They live with their septic systems for years believing that they are functioning well. In fact, most systems are heading toward failure eventually.

A septic tank which is not functioning at peak efficiency will allow escape of solids to the drainage tiles and sand bed. Bacterial digestion in those areas will be insufficient to take the load. The eventual result is tile field failure and expensive replacement of tiles and sand. Septic tanks must be pumped periodically and a digestion accelerator used to improve digestion in the tank and raise the digestion rate in the tiles and surrounding sand.

Septo Clean will unblock tile lines and drainage beds in many instances, but is best applied as economical insurance against such problems.

Septo Clean is a biological product and contains no ingredients which are dangerous for the user or harmful to the environment.

Up to 800 gallon (3000 litres) tanks, flush 1 cup (120g) of Septo Clean down the toilet every two weeks. If odours persist use a double dose or add 120g every week. For systems over 800 gallons (3000 litres), use 2 cups (240g) every two weeks.

ECONOMICAL TO USE

ABOUT \$30 WORTH OF SEPTO CLEAN SHOULD MANAGE AN AVERAGE SYSTEM FOR A TWENTY WEEK SEASON

OUTDOOR TOILETS

If lime or other chemical products have been in use, slake with water daily for one week before using Septo Clean.

Before the first application of Septo Clean (each year), pour 2 buckets of water into each pit. Then, sprinkle 1 cup (120g) over the mass. Repeat the dosage every two weeks. If odour persists, use 2 buckets of water before each application.

Odours eliminated, flies discouraged, mass reduced.

FOR PITS IN PARKS

Prior to the season, pour at least 4 buckets of water over the waste. Add sufficient number of cups of Septo Clean to cover the waste. Add more water to ensure waste is saturated. Waste should drop 2 1/2 feet within 48 hours. Repeat every 2 weeks.

VAULTS & LAGOONS

Add Septo Clean to wet well or water source. 700,000 gallons of effluent would require 50 lbs of Septo Clean, over a 3 week period.

OTHER USES

Add 30g to the humus in compost toilet. Eliminates odour in kitty litter and dog runs. Aids in compost breakdown.
